

For Immediate Release

HOTSTATUS EXTENDS BUSINESS INTELLIGENCE TO THE SUPPLY CHAIN

*Product Enhancements Ease the Integration of Warehouse Management Systems
into Corporate Business Intelligence Solutions*

Mission Viejo, California – November 10, 2005 – HotStatus Enterprises, a leading provider of Supply Chain Management and Supply Chain Visibility solutions for Logistics Service Providers and medium to large enterprises, today announced that they have added tools to their existing product suite that will allow companies to easily extend critical supply chain information to corporate business intelligence systems.

“At the core of any effective business intelligence solution is the ability of company management to have real time access to the KPIs (Key Performance Indicators) required to manage their business,” said Tom Fracisco, President of HotStatus Enterprises. “Our HotVisibility™ solution has always had the capability to integrate warehousing and inventory information across multiple geographic locations. With these enhancements we can now easily extend any supply chain data throughout the enterprise to any Business Intelligence dashboard.”

Using the HotVisibility™ and HotConnect™ products and tools, companies have the ability to create a single point of control over supply chain operations to realize benefits such as improved inventory accuracy, optimized storage space and increased customer service capabilities.

HotVisibility™ is a flexible, menu based application that allows users to display operational data regardless of location or data type. The menu structure, the data that is displayed and the presentation of each screen are user configurable and stored in the HotVisibility™ database. Data is not “hard-coded” so HotVisibility™ can be used to display any type of information – not only warehousing information, so companies can have visibility of their entire supply chain without constraints.

HotConnect™ is a highly reliable messaging system that enables enterprise-wide connectivity across multiple locations within a company and can even interconnect with external supply chain partners and their networks.

About HotStatus Enterprises, Inc.

Founded in 1999, HotStatus provides best-of-breed software and integration solutions to help customers efficiently manage their supply chain and warehousing operations. By enabling multi-point connectivity and visibility throughout distributed operations, HotStatus solutions provide maximum control and return on investment.

HotStatus products have been designed from the ground up to provide a fully integrated enterprise solution of supply chain visibility, connectivity and warehouse management. The HotStatus product suite is designed to allow customers to create a solution that fits their needs – ranging from rapid implementation, web-based applications to highly customized application solutions. Customers have the option to implement the HotStatus products within their own data center operations or in a fully hosted Internet-based offering. Either way, HSE customers realize benefits in weeks - not months or years.
