

For Immediate Release

HOTSTATUS ENTERPRISES ANNOUNCES TOOLS FOR SARBANES-OXLEY ACT COMPLIANCE

*HotStatus Technologies to be Used for Automating Internal Controls and
Maintaining an Audit Trail of Movement Within the Supply Chain*

Mission Viejo, California – June 29, 2005 – HotStatus Enterprises, a leading provider of Supply Chain Management and Supply Chain Visibility solutions for Logistics Service Providers and medium to large enterprises, today announced that they have released a set of products and tools that companies can use to gain compliance with the Sarbanes-Oxley Act.

Although the supply chain is not specifically called out in the Sarbanes-Oxley Act of 2002, section 404 is widely known to affect the movement of goods with regard to reporting their movement and auditing their worth. Management must attest to internal controls and certify them with an auditor. In lay terms, this means that the movement of product from suppliers to Distribution Center's, DC's to stores, stores to stores, etc. must be monitored, tracked and reported in a manner that has a viable audit trail that can be certified by a public accounting firm.

“Although most of the deadlines for SOX compliance have past, many companies are still not compliant with regard to their supply chain,” said Tom Fracisco, President of HotStatus Enterprises. “Companies can no longer afford to have gaps in their records regarding the movement of goods. HotStatus recognizes this is a widely misunderstood area of compliance and is committed to help our clients quickly gain compliance with the Act.”

Some of the critical capabilities for SOX compliance offered by HotStatus include: The ability to direct inventory movement among locations; The creation of inventory movement tasks and validation of moves against the destination location; Providing an inventory adjustment function; Recording inventory adjustments for audit trail requirements; and Managing changes to warehouse inventory. The security features incorporated into the HotStatus product suite insure that usage and audit trails for all activities are maintained.

“We are committed to help our clients develop a world-class strategy for leveraging best practice standards and tools to get results quickly and efficiently,” said Fracisco.

HotStatus provides its customers a single point of control over operations. Whether a company has multiple facilities, is part of a distributed network of partners, or relies on supplier operations, this single view of operations and resources provides the tools needed to maintain the highest standards and controls for managing the supply chain.

About HotStatus Enterprises, Inc.

Founded in 1999, HotStatus provides best-of-breed software and integration solutions to help customers efficiently manage their supply chain and warehousing operations. By enabling multi-point connectivity and visibility throughout distributed operations, HotStatus solutions provide maximum control and return on investment.

HotStatus products have been designed from the ground up to provide a fully integrated enterprise solution of supply chain visibility, connectivity and warehouse management. The HotStatus product suite is designed to allow customers to create a solution that fits their needs – ranging from rapid implementation, web-based applications to highly customized application solutions. Customers have the option to implement the HotStatus products within their own data center operations or in a fully hosted Internet-based offering. Either way, HotStatus customers realize benefits in weeks - not months or years.
